Product and data professional with experience delivering AI features, integrating financial APIs, and improving payments workflows. Connects analysis to product decisions, turns ambiguous requirements into specifications, and follows work through testing and release. Combines Python and SQL with practical use of AI development tools.

EXPERIENCE

Appmosis | Product Data Analyst

Mar 2025 - Present

Consultancy for startup clients, building brokerage aggregation and AI portfolio analytics

- Owned an AI portfolio feature from specification to launch in 6-8 weeks. Defined prompt architecture, data flow, and evaluation criteria; partnered with engineering to deliver answers grounded in users' holdings.
- Built Python pipelines normalizing JSON from 5+ brokerage APIs into a unified schema for portfolio analytics, with daily batch and on-demand refresh. Used Claude Code to accelerate development and debugging.
- Designed repeatable user acceptance testing across 3 financial dashboards. Traced incorrect sector allocations to null prices on halted stocks and caught the issue before production.
- Used SQL to analyze feature usage, investigate data-quality failures, and quantify product tradeoffs. Combined findings with user feedback to inform roadmap priorities.

360 World | Associate Product Manager, Payments

Sep 2024 - Mar 2025

B2B payments platform with wallet and settlement APIs

- Led product delivery across a 4-engineer team under shifting requirements. Reworked sprint priorities to clear 15+ stalled tickets and ship 9 priority features in 4 weeks.
- Analyzed transaction data and modeled wallet loads in place of per-transaction Stripe routing. Finance used the business case to revise unit economics and merchant commercial terms.
- Built Tableau and Power BI dashboards for weekly KPI reporting, replacing an estimated 3-5 hours of manual data pulls per week with self-service visibility for Engineering, Risk, and Finance.

Hypernova | Co-Founder

Aug 2023 - Jun 2024

Early-stage debt recovery venture. Automated email, voicemail, and call outreach on time- and activity-based triggers through a student-built CRM, making small-balance accounts economical to work.

INDEPENDENT PROJECTS

- Agent development harness:** Built and use a shared harness across independent projects to scope tasks, coordinate Claude Code, Codex, and Gemini, and track results. Defined instructions and acceptance checks, with tests and evaluations on selected tasks and separate implementation and approval steps.
- Retrieval evaluation:** Tested a search change on 60 queries with reference answers. Rejected it when recall fell despite better source diversity, keeping the baseline under a pre-set acceptance rule.

EDUCATION

University of California, Davis | B.A. Economics

Jun 2023

Econometrics focus

SKILLS

Technical: Python, SQL, REST APIs, JSON, ETL, Tableau, Power BI, Excel, GitHub

Product & AI: Technical specifications, requirements gathering, UAT, release coordination, prompt design, retrieval evaluation, Claude Code, Codex, Linear, Jira
