

Soham Porwal

PRODUCT DATA ANALYST | AI IMPLEMENTATION | SQL

San Francisco, CA | (925) 918-5707 | soham.porwal@gmail.com
linkedin.com/in/soham-porwal | soham-porwal.soap2000.chatgpt.site

Product data analyst connecting financial data, AI feature delivery, and product decisions. Builds reliable data flows, tests customer-facing outputs, and evaluates changes against explicit acceptance rules.

EXPERIENCE

Appmosis - Product Data Analyst Mar 2025 - Present

San Francisco fintech startup | 15-30 people | <1K users | Brokerage aggregation and AI-integrated portfolio analytics

- Ran SQL analysis across transaction and user-level data to measure feature usage, diagnose data-quality failures, and translate product trade-offs into roadmap decisions.
- Built Python ETL pipelines normalizing JSON from 5+ brokerage APIs on a daily batch and on-demand refresh cadence into a unified schema used by downstream analytics.
- Designed repeatable UAT across 3 financial dashboards and caught 10+ upstream issues before release, including null prices on halted stocks discovered when sector allocation failed to sum to 100%.
- Owned the end-to-end 0-to-1 launch of a portfolio AI feature from specification to release in 6-8 weeks: defined context-window injection logic and prompt architecture, and coordinated engineering delivery.

360 World - Associate Product Manager, Payments Sep 2024 - Mar 2025

San Francisco B2B payments platform | <\$10M annual volume across 10+ merchants | Regulated wallet and settlement APIs | 4-engineer team

- Analyzed transaction-level payments data and modeled wallet loads in place of per-transaction Stripe routing; Finance used the finding to revise unit economics and merchant commercial terms.

SELECTED PROJECTS

- **Retrieval evaluation:** Evaluated source-diversified search against a plain vector-search baseline on 60 queries with reference answers. Rejected the change when recall fell despite improved source diversity, retaining the baseline under a pre-set acceptance rule.
- **Consumer credit forecasting (academic):** Built an ARIMAX model for consumer loan defaults by combining LendingClub records with FRED macroeconomic data; used rolling-window holdout validation and delivered base, stress, and severe scenarios in an Excel/VBA dashboard.

EDUCATION

University of California, Davis - B.A. Economics Jun 2023

Econometrics focus; applied statistics, time series, and data science coursework.

SKILLS

- Core analytics:** SQL; Python (pandas, NumPy); ETL; API integration; data validation
- Applied AI:** LLM integration; prompt architecture; context-window design; retrieval evaluation
- Reporting:** Tableau; Power BI; Excel/VBA
- Academic methods:** R; statsmodels; ARIMAX; rolling-window validation; econometrics
