

Soham Porwal

PRODUCT OPERATIONS | IMPLEMENTATION | FINTECH

San Francisco, CA | (925) 918-5707 | soham.porwal@gmail.com
linkedin.com/in/soham-porwal | soham-porwal.soap2000.chatgpt.site

Product operations and implementation professional who turns ambiguous requirements into specifications, release plans, and measured product changes across financial data and payments systems.

EXPERIENCE

Appmosis - Product Data Analyst Mar 2025 - Present

San Francisco fintech startup | 15-30 people | <1K users | Brokerage aggregation and AI-integrated portfolio analytics

- Owned the end-to-end 0-to-1 launch of a portfolio AI feature from specification to release in 6-8 weeks: defined context-window injection logic and prompt architecture, and coordinated engineering delivery.
- Specified the retrieval path over brokerage data: intent parsing selects only the relevant records from GCP Spanner, assembles a compact context block, and grounds each answer in the user's holdings without sending the full database to the model.
- Built Python ETL pipelines normalizing JSON from 5+ brokerage APIs on a daily batch and on-demand refresh cadence into a unified schema used by downstream analytics.
- Designed repeatable UAT across 3 financial dashboards and caught 10+ upstream issues before release, including null prices on halted stocks discovered when sector allocation failed to sum to 100%.

360 World - Associate Product Manager, Payments Sep 2024 - Mar 2025

San Francisco B2B payments platform | <\$10M annual volume across 10+ merchants | Regulated wallet and settlement APIs | 4-engineer team

- Owned product delivery for wallet and settlement APIs across a 4-engineer team; restructured sprint cadence to clear 15+ stuck tickets and ship 9 priority features in 4 weeks under shifting requirements.
- Ran weekly program governance for wallet and settlement APIs, aligning Engineering, Risk, and Finance across 5-10 executive stakeholders with zero missed escalation SLAs in a regulated payments environment.

SELECTED PROJECTS

- Retrieval evaluation:** Evaluated source-diversified search against a plain vector-search baseline on 60 queries with reference answers. Rejected the change when recall fell despite improved source diversity, retaining the baseline under a pre-set acceptance rule.

EDUCATION

University of California, Davis - B.A. Economics Jun 2023

Econometrics focus; applied statistics, time series, and data science coursework.

SKILLS

Delivery: Technical specifications; requirements; UAT; release coordination; program governance

Data and integration: SQL; Python; ETL; REST APIs; JSON; schema design

Applied AI: LLM integration; prompt architecture; context-window design; retrieval evaluation

Tools: GCP Spanner; Excel; Tableau; Power BI; Jira; Linear
